

Sprayer Preparation:

- Ensure proper clean out of spray equipment, prior to using Gramoxone[®] SL 2.0 herbicide
- For **ground application**, consider use of higher spray volumes: a minimum of 20 GPA, if possible
- **Surfactants:**
 - ◆ Use a surfactant that meets the requirements of the Chemical Producers and Distributors Association (CPDA) adjuvant certification program
- **Nonionic Surfactant (NIS):**
 - ◆ Ground or Aerial Application: NIS containing 80% or more surface-active agent at a minimum of 0.25% v/v (2 pt/100 gal)*
- **Crop Oil Concentrate (COC) or Methylated Seed Oil (MSO):**
 - ◆ Ground Application: COC or MSO containing 15-20% approved emulsifier, at 1.0% v/v (1 gal/100 gal) of the finished spray volume
 - ◆ Aerial Application: COC at 1 pint per acre. Do not use COC when using Gramoxone SL 2.0 for cotton harvest aid

* When tank mixing with fomesafen-containing products, such as Reflex[®] herbicide, use the following rate of NIS: 1% v/v at ≤ 10 GPA, 0.5% v/v at >10 GPA

Mixing Order:

1. Fill spray tank 1/2 full with clean water or other approved carriers such as clear liquid fertilizer
 2. Begin tank agitation and continue throughout mixing and spraying
 3. Nonionic surfactant (NIS)
 4. Dry formulations (WP, DF, etc.)
 5. Liquid formulations (SC, EC, L, etc.)
 6. Gramoxone SL 2.0
 7. Crop oil concentrate (COC) or methylated seed oil (MSO) where needed
 8. Fill remainder of spray tank
- Refer to labels of other pesticide products for mixing directions and precautions which may differ from those outlined here
 - Perform a tank-mix jar-test to ensure compatibility prior to preparing any tank mix that has not previously been verified as compatible
 - In the case of incompatibility in the tank-mix jar-test, repeat the test with the addition of a compatibility agent at the manufacturer's recommended rate, before adding NIS
